# Fast, reliable, and comprehensive mobile app vetting at scale

Q-scout enhances your stack with behavioral analysis that's agentless, actionable, and easy to explain to anyone.

Even in well-managed environments, mobile apps remain a persistent blind spot. Apps that sideload code, interact with other apps, or run unauthorized background services present both security risks and compliance gaps, remaining invisible to most monitoring tools.

Q-scout delivers the app-level risk visibility missing from your mobile security stack. It provides your team with actionable intelligence that integrates seamlessly into MDMs—without agents, user friction, or extra effort.
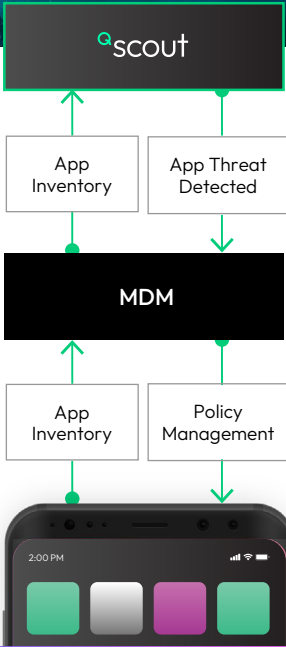

Q-scout fills the mobile app security gap

	ᵠscout	MDM	MTD
App behaviour visibility	●	○	○
Agentless	●	○	○
Compliance alignment	●	○	◑
Third-party SDK insights	●	○	◑
Obfuscated / protected apps	●	○	○
Integration flexibility	●	◑	◑
Pre-execution threat detection	●	○	◑

MTD (Mobile Threat Defense) is device- and network-focused. Q-scout is built for app behavior insight.

Benefits of Mobile App Vetting with Q-scout

100% app coverage
Scans and vets every app on a device, including those from third-party stores, ensuring no threat goes undetected.

Actionable threat insights
Profiles malicious behaviors like app collusion that lead to unauthorized access to sensitive data or system resources.

Seamless integration
Q-scout integrates with MDMs, giving security teams real-time visibility into the mobile apps installed across MDM-managed devices.

No end user disruption
Q-scout performs deep app analysis off-device—no new agents, no extra endpoint load, and no user disruption.

Accurate software inventory
Generates complete SBOMs (Software Bills of Materials), including embedded libraries, to enable detailed and reliable vulnerability analysis.

Policy-driven remediation
With MDM integration, Q-Scout enforces policy across managed devices—blocking, alerting, or flagging apps based on real risk, not assumptions.

Compliance support
Maps app risk assessments to GDPR, OWASP Mobile Top 10, and security standards to streamline audits and insurance evaluations.

Continuous app vetting
Continuously analyzes apps for malicious indicators, reducing manual review time and staying ahead of potential new risks when apps are updated or added.

> Q-scout adds the app risk visibility that your mobile tools lack—no agents, no noise, just real protection your team can prove.

Quokka

Quokka is a mobile security company trusted by Fortune 500 companies and governments worldwide to reduce their mobile attack surface. Formerly known as Kryptowire, the company was founded in 2011 and is the first and now longest-standing mobile app security solution for the US Federal Government. Quokka's mobile app risk intelligence uncovers what others miss— malicious behaviors, colluding apps, privacy risks, and compliance gaps. Leveraging AI-powered engines, Quokka cuts through the noise to deliver visibility and control over mobile app threats.

10M+ devices protected	**230+** mobile CVEs
2M+ apps scanned	**350+** academic citations
115K+ weaknesses found	**75+** customer countries
500+ device vulnerabilities	**11** academic papers
